

PowerRailsBoard – Multi–Rail Power Management Board

5 V input -> sequenced 1.2 V core, 1.8 V I/O, and 3.3 V sensor rails

Schematic–level design with protection, enable sequencing, output caps, loads, and bring–up test points.

Bring–up test points

Enable RC sequencing network

Notes:

- Rail A starts first, Rail B after ~2 ms, Rail C after ~4 ms.
- Assign final manufacturer footprints and current–rated regulators before PCB fabrication.
- This schematic is intended as a clean schematic–level portfolio deliverable.
